FOREWARD

The Department of Education has produced an enrolment estimate for public schools in Manitoba for the period 1982 - 1987. The intention of the estimate is to provide some indication of the direction and magnitude of future enrolment trends in order to facilitate planning of financial requirements. The enrolment estimate should be considered in conjuction with the purpose and assumptions under which these estimates were prepared.

The current estimate report is divided into seven sections each representing a specific year. The first section contains actual enrolment figures for 1981 while the remaining six sections comprise estimated enrolment figures for the years 1982 - 1987 inclusive.

The source of actual enrolment information is the Superintendents' Report submitted annually by each school division and remote district in the Province of Manitoba. The data represents the number of pupils who were attending public schools on September 30, 1981. Similarily, the enrolment estimate represents the number of pupils expected to be attending public schools on September 30 of each estimate year.

ASSUMPTIONS AND METHODOLOGY

Grades II - Grades XII Enrolment

The methodology used in preparation of the estimated enrolments for grades II through to grades XII was derived primarily from retention rates. Historically these rates have been relatively reliable in estimating enrolment.

$$\text{RETENTION RATE} = \frac{\text{Enrolment in a give grade for a given year}}{\text{Enrolment in the preceding grade for the preceding year}}$$

Retention rates show the percentage of children that proceed through the grades year by year. For grades II through grade XII, retention rates were calculated for the years 1973 to 1981, inclusive. These rates served as the basis for determining a retention rate that could be systematically applied to enrolments in the immediately lower grade of the preceding year, to calculate an estimated enrolment for each grade.

Implicit in the retention rates are such factors as migration, immigration, failures and dropouts, which combine to form the historical trends upon which the retention rates are based.

The combined effect of immigration and interprovincial migration is shown in Table I. It appears that in recent years there has been a trend towards a positive net effect on school age population in Manitoba. An adjustment has been included in the retention rates, used for the purposes of estimating, to reflect this change.

Special Education, Nursery, Kindergarten and Grade I Enrolment

Estimating special education, nursery, kindergarten and grade I enrolments pose a particular problem because enrolment in these programs bear little relationship to enrolment in preceding years and therefore retention rates are not applicable.

Special education enrolments depend upon the number of children with special needs from year to year. Therefore, special education enrolments were estimated by observing historical trends and enlarging the estimate slightly, year by year, to take into consideration the increasing attention being given, in recent years, to special needs.

Nursery enrolments were estimated by observing historical trends and attempting to predict which direction enrolment would move. It was assumed, that over the estimated period, 1982 to 1987, there would be minimal growth in nursery enrolments.

Kindergarten and grade I enrolments were estimated on the basis of population statistics available from the Manitoba Health Services Commission.

TABLE I

COMBINED EFFECT ON MANITOBA SCHOOL AGE POPULATION(1) OF NET INTERPROVINCIAL MIGRATION(2) AND IMMIGRATION(3) 1978 - 1981

Year	1st Q	2nd Q	3rd Q	4th Q	TOTAL
1978	(189)	(301)	(1,090)	(761)	(2,341)
1979	(362)	(418)	(1,317)	(906)	(3,003)
1980	(175)	(22)	(522)	(847)	(1,566)
1981	(65)	+286	(167)	+44	+98

(1) School Age Population 0 - 18 years of age.

(2) Net Interprovincial Migration is defined as the number of children entering Manitoba from other provinces less the number of children leaving Manitoba for other provinces.

(3) Immigration is defined as the number of children entering Manotba from outside of Canada.

The Combined Effect is determined by adding together the net interprovincial migration and immigration statistics. Therefore, a ( ) represents a decrease and a + represents an increase.
